## GALAXY S7 EDGE

by Matthew Adams Matthew Adams Windows & Software Expert Matthew is a freelancer who has produced a variety of articles on various topics related to technology. His main focus is the Windows OS and all the things... read more Updated on March 5, 2022 If your USB-C to HDMI adapter is not working, the issue might be connected to the dedicated driver. So we're recommending updating the USB to HDMI driver using a specialized tool. Alternatively, recently installed Windows 10 updates can lead to problems with cables and ports. Of course, the problem might also be hardware-related, meaning the adapter itself. XINSTALL BY CLICKING THE DOWNLOAD FILE To fix various PC problems, we recommend Restoro PC Repair Tool: This software will repair common computer errors, protect you from file loss, malware, hardware failure and optimize your PC for maximum performance. Fix PC issues and remove viruses now in 3 easy steps: Download Restoro PC Repair Tool that comes with Patented Technologies (patent available here). Click Start Scan to find Windows issues that could be causing PC problems. Click Repair All to fix issues affecting your computer's security and performance Restoro has been downloaded by 0 readers this month. USB to HDMI adapters enable users to connect their desktops or laptops to secondary display devices via HDMI, even if they don't have an HDMI port on their device. However, USB to HDMI adapters doesn't always work for some Windows 10 users. A few have even posted on the Microsoft forum about their USB to HDMI adapters not working. I am using HP-21 Pavilion all in one desktop. My machine is not having VGA or HDMI port. On this machine (Windows 11) I was using display link USB-HDMI Display Adapter to connect projector and Second Monitor. It worked very well. But after windows 10 anniversary updates it stopped working. I tried with latest Display Link drivers. When I insert USB adapter in USB port built in screen becomes black. Why is USB-C to HDMI adapter not working on Windows 11? If this issue occurs, it's possible that your HDMI port isn't working, so be sure to test it with a different cable to make sure everything is in order. To circumvent this problem, many are using docking stations, but sadly, few users reported that Windows 11 is not detecting docking station. This isn't the only type of cable that has issues, and many reported that USB-C to DisplayPort cable isn't working, but that can be easily fixed. How do I fix the USB to HDMI adapter issues? 1. Update the USB to HDMI driver Press the Windows Key + S and type in Device Manager. In the Device Manager, expand Other Devices. Right-click on your USB device and select Update Driver. A USB to HDMI adapter issue can be due to an incorrectly installed or incompatible device driver. Thus, updating the USB to the HDMI adapter's driver can potentially fix it. Update drivers automatically You can download the latest driver for your USB to HDMI driver from its company's website. With a little research, you should find the correct driver. Expert Tip: Some PC issues are hard to tackle, especially when it comes to corrupted repositories or missing Windows files. If you are having troubles fixing an error, your system may be partially broken. We recommend installing Restoro, a tool that will scan your machine and identify what the fault is. Click here to download and start repairing. However, the best way to update your drivers is by using a specialized third-party tool that will automatically scan your hardware for the latest available version and download it. Various errors are the result of a malfunctioning driver. When this is the case, you may need to update or reinstall completely this specific component. As the process is not straight-forward to complete, we recommend using an automated tool for the job. Here's how to do it: Download and install DriverFix. Launch the app. Wait for the software to detect all your faulty drivers. You will now be presented with a list of all the drivers that have issues, and you just need to select the ones you'd liked fixed. Wait for DriverFix to download and install the newest drivers. Restart your PC for the changes to take effect. Keep your Windows safe from any type of errors caused by corrupted drivers, by installing and using DriverFix today! Disclaimer: this program needs to be upgraded from the free version in order to perform some specific actions. 2. Rollback a Windows 10 build update Open the search box by pressing the Windows Key + S. Next, type Updates in the search box. Click Recovery to open Settings. Then, click the Get started button under Go back to the previous version of Windows 10 subheading. You can roll back a Windows 10 build update for 10 days after an update. Then go through the guidelines to roll back the platform. Some users have said that their USB to HDMI adapters stopped working after Windows 10 build updates. To roll back a recent Windows 10 build update, use the method above. 3. Connect to an alternative USB port/ Change hub There might be an issue with the USB port you're connecting your USB to the HDMI adapter with. So, try connecting your USB to an HDMI adapter with another port on your desktop or laptop. Alternatively, if you're using a USB to HDMI hub and have a spare one, switch between them to see if this is not a hardware issue. Here's an awesome list of the best plug-and-play USB hubs on the market nowadays. They will help you connect and switch between multiple devices without plugging and unplugging them. Read more about this topic 4. Scan for hardware changes Right-click the Windows 10 Start button to select Device Manager on the Win + X menu. Select your PC at the top of Device Manager. Click Action to open that menu. Select the Scan for hardware changes option. Then try utilizing the USB to HDMI adapter after scanning. Windows might recognize a connected USB to HDMI adapter after you scan for hardware changes. The above resolutions might fix USB to HDMI adapters for some users, but maybe not everybody. Some users might need to change their adapters. Are you having other USB-related problems? Here is a useful article dedicated to fixing the USB-C if it's not working properly on your device. Users with adapters still within their warranty periods can also return them to manufacturers for repairs if they still don't work. Frequently Asked Questions This article covers: Topics: Was this page helpful? 5 Start a conversation by Jenefrey Aaron Updated on 2022-02-12 / Update for Fix AndroidWe always use recovery mode to fix various kinds of issues for Samsung and other Android device. But what if you can't access Samsung recovery mode and received the "No Command" error, how to get this issue fixed? Normally, the recovery mode not working and no command error in recovery mode on Samsung occurred when you are trying to reset your Samsung device. Also, Super Users access has been denied or canceled when installing the Google Play store or update the OS software that could result in the recovery mode not working. Here, in this post, we will guide you to fix Samsung recovery mode not working issue on Samsung Galaxy S22 Ultra/Galaxy S22, Note 8/7/6 and earlier devices in details, just keep reading. Flashing a custom ROM could help you resolve this issue. That is because a custom ROM will bring some new features and customizations, it can also be used to solve the Android recovery mode no command error. In order to do so, you need to unlock your bootloader and flash a custom recovery. To get started, you need two professional tools, one is CynogenMod, it is a popular version that can be downloaded from its website. The other one is Google App's zip file, have it downloaded by clicking here. Once downloaded and installed, we need to put these two .zip files on our phone. Plug in your phone with a USB cable and drag the ZIP files to the phone's internal storage or SD card. Step 1: Then download and install the latest version of TWRP on your device and follow the instructions on the computer to install it. Once installation completed, rename it as TWRP.img and place it on the desktop. Here, don't forget to enable the developer options. Step 2: Next, you need to reboot your phone into TWRP recovery mode by pressing the Power and Volume down button at the same time. Then hit the Wipe button to reset your device. After resetting your device, then head to the "Install" or "Install ZIP from SD Card" section of your recovery. Step 3: Locate the ZIP file you downloaded before, and select it from the list to flash it. Step 4: Once the ROM is flashed, hit on the Reboot System and then the Samsung recovery mode not working issue should be fixed successfully. If you cannot boot into Samsung recovery mode, Tenorshare ReiBoot for Android gives you an easier way to boot your Samsung device into recovery mode without manually holding down any buttons in one click. Now get ReiBoot for Android downloaded and installed on your computer first. Then connect your Android device to computer. Step 1 Download ReiBoot for Android on computer and connect your Android device with an USB cable. Choose "One-Click to Enter Recovery Mode" from the main interface. Note: If ReiBoot for Android cannot detect your Android device, you can try the following guidance to enable USB debugging. Step 2 You will find the phone automatically reboots with Samsung logo then the Android robot icon. Wait until you see the Recovery screen and you can select the recovery mode option you need to use. The recovery mode on an Samsung phone can be used to solve various issues when your device get frozen, stuck, bricked, etc. but there are times when recovery mode not working or get no command error. An easy way to fix this issues is using Tenorshare ReiBoot for Android, a professional tool to repair Android system to fix more than 50 common issues such as recovery mode no command error, stuck in fastboot mode, download mode, black and blue screen and much more. Step 1 Run this program after installing and connect your device to your computer via USB cable. Click on 'Repair Android System' on the main interface. Step 2 On the following screen, you have to click on 'Repair Now' button. Step 3 Select the device information such as brand, series, model, country and carrier, and click on the 'Next' button to download the firmware package appropriate for your device. Step 4 When the downloading is done, click on 'Repair Now' button. Read the pop-up message and click on 'Continue' button. Step 5 Following the on-screen instructions and perform the action required accordingly. After repairing, the program will prompt you that 'The repair process is completed'. Now, I believe you have learnt how to fix Samsung recovery mode not working and no command error after reading this post, if you think this post is helpful, just kindly share it with your friends who can't access recovery mode on Android devices.
